
The Global Vaccine Deployment Working Group is working with country teams to develop plans and enable the delivery and administration of initial doses in April 2021.

Deployment & coordination

The Global Vaccine Deployment Support Team (GVDST) has been set up to provide hands-on support to the UN personnel vaccination efforts carried out by UN country teams, throughout the development of local vaccination plans and during the execution phase. GVDST is composed of UN partners such as the UN Medical Directors network, the Field Communications Working Group as well as medical, IT and logistics specialists within DOS. At the country level, **Local Vaccine Deployment Coordinators (LVDC)** are being nominated to develop local deployment plans and are responsi-

² personnel and partners are included in this programme and to prioritize those eligible individuals based on occupational and medical risk criteria in each country. Where initial vaccine supplies are insufficient to cover the entire eligible population in a given country, subsequent shipments will be arranged as supply increases. The exact modality of vaccine distribution and administration will depend on the situation and capacities in individual countries.
